StayOnline®
The Power Cord Company

HOSPITAL GRADE

- **Shielded Cords** minimize EMI/RFI interference
- **Angled Plugs and Connectors** reach hard-to-access locations
- **Clear end versions** visually confirm HG termination
- **Locking connector options** to avoid inadvertent disconnects

HG Molded Options:

5-15 to C13 Locking Female
5-15 to C13
5-15 to C13 Up Angle
5-15 to C13 Down Angle
5-15 to C13 Right Angle
5-15 to C13 Left Angle
5-15 to C13 Clear Ends
5-15 to C13 Right Angle Clear Ends
5-15 to C13 Left Angle Clear Ends
5-15 Up Angle to C13 Clear Ends
5-15 Down Angle to C13 Clear Ends
5-15 Right Angle to C13 Clear Ends
5-15 Left Angle to C13 Clear Ends
5-15 Up Angle to C13
5-15 Down Angle to C13
5-15 Right Angle to C13
5-15 Left Angle to C13
5-15 to C13 Shielded
5-15 Up Angle to C13 Shielded
5-15 Down Angle to C13 Shielded
5-15 Right Angle to C13 Shielded
5-15 Left Angle to C13 Shielded
5-15 to 5-15 Extension
5-15 to C19
5-20 to C19
5-20 to C19 Shielded
5-20 Up Angle to C19
6-15 to C13
6-15 to C13 Shielded
6-15 Up Angle to C13
6-20 to C19
6-20 to C19 Shielded
6-20 Up Angle to C19

How is HG different?

The ground pin is heavier and stronger. Retention force for live and neutral is much greater. A separate ring clamp inside the mold is present, which enhances the wire retention force. Prong blades are solid brass construction, no folded material. HG cords withstand tough conditions and are identified by a green dot.

Why is this important?

If a medical device used in patient care fails due to a NON-Hospital Grade cord you are legally exposed!

ⓘ Cords in stock with various gauges to maximize Ampacity or minimize Diameter to afford flexibility.

ⓘ A power path is only as good as the weakest link. Where do your power cords really come from?
